

Trust and DSL Reporting Capabilities

Designed for Trusts. Built for DSLs. Centred on the child.

StudentKeeper®, is engineered to give Trust leaders and DSLs unparalleled visibility and control over safeguarding data.

Built on ContentKeeper's® enterprise-grade architecture, it transforms fragmented information into actionable, auditable insights that protect student wellbeing and simplify compliance workflows.

Real-time alerts and insights that empower safeguarding teams to act before issues escalate.

Proactive Detection & Real-Time Alerting

- ✓ **Real-Time Risk Identification:** AI-powered keyword and contextual analysis detects self-harm, bullying, or violence-related activity and instantly flags at-risk behaviour.

- ✓ **Customisable Keyword Management:** Schools can adjust keyword lists to reflect local risks — activating, deactivating, or excluding specific terms for precise monitoring.

- ✓ **Regular Updates:** Keyword libraries are continuously updated to capture emerging online trends and new safeguarding concerns.

Automated DSL Reporting & Workflow

- ✓ **Automated Alert Routing:** Alerts automatically reach designated DSLs, counsellors, or principals based on school, keyword type, or role.

- ✓ **Targeted Visibility:** Staff see only what's relevant. Teachers view captures for their students, while DSLs can access Trust-wide visibility.

- ✓ **Grouped Captures for Efficiency:** Historical data is grouped by student, keyword, and severity to identify behaviour patterns and reduce review fatigue.

Seamless Integration & Forensic Reporting

- ✓ **CPOMS Integration:** Safeguarding notes and captures sync directly with CPOMS, including visual markers and timestamps, eliminating duplicate reporting.

- ✓ **Safeguarding Note Autofill:** Contextual data (student, class, teacher) auto-populates new reports, saving time and improving accuracy.

- ✓ **Behavioural Dashboards:** Interactive dashboards reveal keyword trends, search activity, and frequency data to help identify emerging concerns.

- ✓ **Forensic-Grade Export:** All records are securely stored and can be exported as PDF or CSV for audits, investigations, and compliance reports.
