

# Meet Wasabi Hot Cloud Storage

Wasabi is cloud storage for the data businesses already need to keep safe and accessible, from backups, archives and video to customer files and project data, with one flat rate for what you store and no added charges for using, moving or retrieving your data.

## One simple price

Pay per TB of storage. That is the bill. No charges for moving the data. No charges for using it. No charges for getting it back. The line item stops moving from one month to the next.

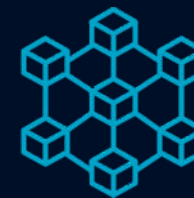

## Fast access, always

Wasabi is hot cloud storage by default. Your data is ready when the business needs it, with no retrieval delays and no different tiers to manage. The fast version is the only version.

## Works with what you already have

Wasabi follows the same standard most modern cloud tools already use. Existing backup software, applications and integrations carry across without a rebuild.

## Built to scale

Whether you are storing 10 terabytes or a petabyte, the price per unit doesn't change. Growing the business doesn't change the pricing model.
